# Acknowledgement

The Zambia Bureau of Standards would like to thank national stakeholders for their input into the development of this National Standards Strategy. ZABS would also like to thank the Government of the Republic of Zambia and the Commonwealth Standards Network for the support rendered during the development of this Strategy.

# Acronyms

7NDP	Seventh National Development Plan
AfCFTA	African Continental Free Trade Area
ISO	International Organisation for Standardisation
MSME	Micro, Small and Medium Enterprises
NQI	National Quality Infrastructure
SDGs	Sustainable Development Goals
SQAM	Standardisation, Quality Assurance and Metrology
ZABS	Zambia Bureau of Standards

# Executive Summary

This National Standards Strategy has been developed to provide direction on the standards to be developed and implemented to support industrial growth and implementation of government policies, strategies and programmes. It is aimed at supporting industry and government to realize goals and objectives of the Vision 2030 whose strategies and programmes are being implemented through various measures including the Seventh National Development Plan (7NDP), the National Quality Policy, the Industrialization and Job Creation Strategy and Zambia's attainment of Sustainable Development Goals (SDGs).

The Strategy constitutes priority areas where standards need to be developed and implemented. The prioritization is based on economic and social importance of sectors, developmental plans and stakeholders' current and future needs.

The Strategy particularly envisages the development or adoption and implementation of various standards to enhance the quality of products and services in health, education, agriculture, mining, manufacturing, tourism and arts, forestry, energy, water and sanitation, construction, information and communication, transport, finance and insurance and social services. It includes the adoption and implementation of standards to address quality related challenges for environmental protection, climate change mitigation and resilience, rural development, girl child education, occupational health and safety, private and public services and SDGs attainment.

Among others, the Strategy has also put emphasis on development and adoption of standards to support Micro, Small and Medium Enterprises' (MSMEs') growth which has been identified as the vehicle for sustainable poverty reduction and improved quality of life of Zambian households through wealth and job creation. It supports the actualization of goals and objectives of strategies and programmes aimed at inclusive growth of businesses, especially the MSMEs growth, in order to enhance their contribution to the development of the country.

The standards proposed to be developed in this Strategy were determined based on economic and social importance, development plans and stakeholder current needs. Data from relevant institutions and authorities was collected from various sources. This included contribution to Gross Domestic Product, import and export data and the Seventh National Development Plan (7NDP). Further, information from stakeholder was collected through stakeholder engagement in Lusaka, Southern, Central and Copperbelt Provinces.

A total of at 484 standards covering various sectors will be developed over a period of three years. The Strategy will be reviewed and revised regularly to incorporate emerging standards' needs. A total of twelve (12) additional Technical Officers to the existing 4, five (5) Editors and five (5) Secretarial Support Staff per year are required to undertake the development of the standards included in this Strategy. A total budget required to develop these standards will be advised annually.

Zambia Bureau of Standards' role as mandated through the Standards Act No. 4 of 2017 will be to facilitate and coordinate the development of these priority standards by experts and stakeholders in the respective sectors.

## 1. Introduction

The Zambian people's vision is to become "A Prosperous Middle Income Nation by 2030". The Vision is being operationalized through five year development plans with the current one being the Seventh National Development Plan (7NDP) (2017-2021)

The 7NDP has identified the following strategic areas as the driver for national development: economic diversification and job creation; poverty and vulnerability reduction; reducing developmental inequalities; enhancing human development; creating a conducive governance environment for a diversified and inclusive economy.

This National Standards Strategy has been developed to guide the nation on which areas to develop and implement standards in order to support policies, strategies and programmes aimed at actualization of the goals and outcomes of these strategic areas, so as to promote the economic development of the nation. These outcomes include: a diversified and export oriented agriculture, a diversified and export-oriented mining sector; a diversified tourism sector; improved energy production and distribution for sustainable development. In addition, the Strategy has been developed to address other stakeholders' such as MSMEs standardization needs.

In order to support the enhancement of the competitiveness of Zambia's goods and services, the standards to be developed and implemented will be aligned to International Standards to support government policies, strategies and programmes for inclusive business growth and economic development.

## 2. Goal of the Strategy

The goal of the Strategy is to provide effective and relevant standardization to support industry growth, policies, strategies and programmes for improved livelihood and inclusive growth and development of the country.

## 3. Justification for National Standards Strategy

The National Standards Strategy has been developed in order to provide a focused approach on what standards to develop and implement to support the effectiveness and efficiency of various policies, strategies and programmes.

### 3.1 Industrialization and Job Creation Strategy

The Government of the Republic of Zambia has developed the Industrialization and Job Creation Strategy which has identified manufacturing, tourism, agriculture and construction as strategic areas for job creation. Job creation in these sectors can be realized if the sectors are competitive through the provision of quality products and services. This Strategy is therefore important in order to address specific standardization challenges that these strategic areas need to address if they are to remain competitive and provide world class products and services, thereby contributing effectively to the job creation agenda. It calls for the development and implementation of standards to address quality related challenges in manufacturing, tourism, agriculture and construction sectors and the supporting sectors such as infrastructure, information and communication (ICT), finance, education, skills training, transport and logistics.

### **3.2 Industrial Policy**

The government has developed an Industrial Policy. The policy aims to transform Zambia from a producer and exporter of primary products into a net exporter of value added goods utilizing local primary resources with increased citizens' participation to facilitate sustainable economic growth through industrialization. This Policy focuses on eight (8) manufacturing sub-sectors as priority drivers of industrialization. These include processed foods; textiles and garments; engineering products; wood and wood products; leather and leather products; mineral (metallic and non-metallic) processing and products (beneficiation), with construction, agriculture, education, energy, ICT and Health as the key supportive sectors. In order to realize the transformation of primary products to value added products, standards and quality assurance are paramount. This Strategy therefore aims at developing and implementing standards to support the effective implementation of the policy. The standards to be developed and implemented will support the policy focus areas in order to enhance the quality in these sectors to actualize diversified and export oriented products and services.

### **3.3 National Quality Policy**

In 2010, the Government of the Republic of Zambia approved and launched the National Quality Policy which brought about the re-alignment of the National Quality Infrastructure to international best practice. The re-alignment of the NQI was aimed at enhancing the effectiveness of the NQI in providing a conducive environment for business growth with regard to standardization, quality assurance and metrology services. This realignment, among others, brought about the redefining of Zambia Bureau of Standards' (ZABS') mandate from being a regulator to "A friend of industry" and whose role is more focused on supporting the industry to implement standards to enhance the quality of products and services for industry growth and competitiveness. Enhancement of industry competitiveness calls for the development of industry driven standards that will give Zambia's businesses a competitive edge in both local and international markets. Therefore this Strategy has been developed to contribute to the operationalization of the National Quality Policy by providing a systematic and focused standardization system that will ensure that relevant standards that respond to industry needs are developed and implemented. The provision of relevant standards will support the provision of a conducive business environment to support inclusive business growth and industrialization.

### **3.4 Micro, Small and Medium Enterprises Policy**

The goal of the Micro, Small, and Medium Enterprises (MSME) Policy is to create a vibrant, dynamic sector that contributes significantly to the Gross Domestic Product. In order for these MSMEs to contribute significantly to the GDP, these MSMEs have to be competitive and be able to grow. Competitiveness and growth is premised on these MSMEs being able to produce quality products and services through the use of standardization, quality assurance and metrology services. This Strategy has been developed to also provide MSMEs relevant standards in order to assist them to produce quality products and services. This will enhance MSMEs' inclusiveness in strategies and programmes towards the industrialization and job creation agenda. Further, MSME standards will support MSMEs to grow, thereby contributing to reducing inequalities among communities.

### **3.5 African Continental Free Trade Area (AfCFTA)**

The African Continental Free Trade Area (AfCFTA) came into force in May 2019 with the goal of accelerating intra-African trade and boosting Africa's trading position in the global market by strengthening Africa's common voice and policy space in global trade negotiations. In order

for Zambia to fully participate and benefit from the AfCFTA it is important that the strategic sectors identified under the Industrialization and Job Creation Strategy are able to compete favourably with other products and services in the free trade area. It is therefore important that these key sectors are supported with effective standardization, quality assurance, accreditation and metrology (SQAM) services to prepare them to compete effectively in the African Continental Free Trade Area. This Strategy therefore calls for the development and implementation of relevant standards to support the competitiveness of business in order for Zambian businesses to participate and benefit from the AfCFTA.

### **3.6 Sustainable Development Goals (SDGs) Attainment**

This standards strategy has also been developed in order to support policies, strategies and programmes that have been put in place for Zambia to attain its SDGs.

#### **3.6.1 Industry, Innovation and Infrastructure (SDG 9)**

Standards play a vital role for a viable industry and quality infrastructure and commercialization of innovations. This strategy supports the industrialization and job creation agenda through the provision of standardization quality assurance, accreditation and metrology services to the agriculture, tourism, manufacturing and construction sectors. The standards to be developed include those to address quality challenges related to value addition in the agriculture, manufacturing and construction sectors. Standards are also important tools in building safe and resilient infrastructures. The Strategy calls for the development and implementation of standards for infrastructure development that provide for the required safety and performance of infrastructure. The Strategy aims particularly at enhancing the quality of value added agro-products and manufactured products. It calls for the development and implementation of standards that will promote and support innovation through to commercialization for effective entry of these products and services in markets.

#### **3.6.2 Clean Water and Sanitation (SDG 6)**

The strategy aims at the development and implementation of standards and practices that will ensure access to clean water and quality sanitation services. Improvement of water and sanitation systems calls for the development and implementation of appropriate standards for this sub-sector to provide quality water and sanitation services. The standards will address the quality of infrastructure, water and the services associated with this subsector. The proposed standards to be developed and implemented include those to address challenges on drinking water quality (including contamination), domestic onsite sanitation systems and management of water crisis in order to address disease outbreaks associated with drinking water.

#### **3.6.3 Affordable and Clean Energy (SDG 7)**

Currently, there is need for access to affordable and clean energy. The strategy advocates for the development of standards for alternative forms of affordable and clean energy. It includes the development and implementation of standards for renewable energy such as solar energy and other forms of alternative energy. Standards to facilitate investment in Off Grid power generation infrastructure are proposed. These standards will ensure that this energy is not only supplied at the required quality but also that it is safe for use by all. In order for different forms of energy to co-exist, there is a need for standards to ensure that the country's energy mix works effectively and efficiently. In addition, the standards will support Zambia's rural electrification agenda to enhance access to electricity by rural communities. This will contribute to reduced deforestation thereby assisting climate change mitigation measures. The strategy proposes to develop standards that cover various aspects including off-grid and rural grid extension systems.

### **3.6.4 Climate Action and protection of life in Water and land (SDGs 13, 14, 15)**

The strategy includes standards development to mitigate climate changes and protection of our environment and ecosystem. This includes standards for environmental management, the sustainable use of forestry and forestry products, adoption of green technologies and promotion of standards that can contribute to enhanced climate resilience among vulnerable communities. The standards proposed include those that address challenges in waste management.

### **3.6.5 Responsible Consumption and Production (SDG 12)**

The strategy also aims at developing and adopting standards that promote responsible consumption and production. These standards include sustainability standards which for instance promote reduction in the negative impact on the environment and society. Standards to ensure the sustainable use of forestry products and other national resources are included.

### **3.6.6 No poverty (SDG 1)**

The strategy includes the development and adoption of standards that provide for best practice in all areas of economic activity, from agriculture to banking. This strategy aims at supporting MSMEs through the development of MSMEs standards that can be used by these businesses to produce quality products that are able to enter both local and international markets, thereby providing income and contributing to poverty reduction. Further, the strategy advocates for the development and adoption of standards to inculcate best practices to enhance public administration, procurement and governance. It includes the development and adoption of anti-bribery management systems and guidance for sustainable procurement in sectors such as construction. Sustainable procurement is the process of making purchasing decisions that meet an organization's needs for goods and services in a way that benefits not only the organization but society as a whole

### **3.6.7 Zero Hunger (SDG 2)**

The strategy aims at developing standards for the agriculture sector. These standards will include standards for agricultural inputs and products. Further, standards for value added agricultural products will be developed in order to support the agenda of transforming the agriculture sector from being a predominantly primary agricultural products exporter to an exporter of value added products. It includes standards for inputs to livestock production and value added products thereof and standards to promote climate change resilience and adaption for food security.

### **3.6.8 Good Health and Well-being (SDG 3)**

The strategy aims at contributing to Good Health and Well-being by developing or adopting standards that can contribute to improvement in health care services. These include the adoption of internationally accepted standards for supporting safe, quality medical practices, services and equipment. Further, in collaboration with stakeholders, standards to support efforts to address nutrition challenges will be developed. The aim is at address quality related challenges in nutrition, and the use of herbal medicines and cosmetics.

### **3.6.9 Quality Education (SDG 4)**

Recognizing the importance of quality education for all, this strategy also aims at the development and adoption of standards for improving management systems to address various quality management challenges that the education system faces such as examination malpractices and the quality of skills needed by the industry. It includes development of standards that will ensure that the quality of knowledge and skills imparted meet the expectation of society. The strategy also advocates for the inclusion of standardization, quality assurance and metrology knowledge in school curricula in order to incorporate quality culture at an early stage in schools.

### **3.6.10 Gender Equality (SDG 5)**

The strategy proposes standards to support investment in menstrual hygiene in order to enable girl children to attend school during menstrual cycles. It proposes the provision of quality sanitary towels to a girl child to contribute to gender equality in accessing education. It is envisaged that once standards for sanitary towels are developed, they will be implemented by both the private and public sectors in order to gender equality in education.

### **3.6.11 Decent Work and Economic Growth (SDG 8)**

The strategy also aims at the development and adoption of standards that promote decent work. These standards include Occupational Health and Safety and other standards that promote the country's Decent Work agenda.

### **3.6.12 Reduced Inequalities (SDG 10)**

Currently the government has put up a number of programmes to reduce inequalities. These include the support to MSMEs to grow their businesses to increase their income. This strategy advocates for support to SMEs specifically on standardization and quality assurance services in order for them to competitively participate in trade as a tool for reducing inequalities in our society. The government has further realigned the National Quality Infrastructure through the launch of the National Quality Policy to improve the quality of SQAM services. Standards relevant to MSMEs have been included to be developed.

### **3.6.13 Sustainable Cities and Communities**

With high urbanization, there is a need to have cities that will accommodate the rise in population in the cities while maintaining the sustainability of these cities and communities. There is therefore a need for standards that will ensure that the cities are well planned to ensure the wellbeing of its communities now and in the future. The design and construction of these cities should take into account the sustainability of these cities and communities in light of the increasing demands for amenities. The strategy therefore proposes the development and adoption of various standards for sustainability and quality livelihood in communities in cities.

## 4. Standardization Priorities Determination

### 4.1 Determination of National Priorities

The Standardization Strategy was developed based on the International Organization for Standardization (ISO) recommended methodology for the development of a National Standardization Strategy. It has been developed through a sequence of process steps as outlined below.

#### **Step 1: Basis for Determination national standardization priorities**

The prioritization is based on economic and social importance, development plans and stakeholder current needs. Data from relevant institutions and authorities was collected from various sources. This included contribution to Gross Domestic Product, import and export data and the Seventh National Development Plan (7NDP). Further, information was obtained through stakeholder engagement.

#### **Step 2: Prioritize of standards to be developed**

A priority list of subjects for standards development and standards was determined and the corresponding list of standards to be developed in all the areas was identified.

#### **Step 4: Human resources requirements**

The human resources requirements for the implementation of the plan over a three year period were calculated based on the standards to be developed.

#### **Step 5: Publication of National Standards Strategy**

The strategy was developed and subjected to a validation workshop for approval by stakeholders.

### 4.2 Expected benefits

The development and implementation of the standards included in this strategy will be very vital in supporting both the private and public sectors to effectively implement policy, strategies and programmes for the development the development of the country. The standards will support:

- actualization of the goals of the Industrialization and Job Creation Strategy
- the effective participation of the private sector in the Africa Continental Free Trade Area;
- attainment of the goals of the Industrial Policy, National Quality Policy, Small and Medium Enterprises Policy, and the Sustainable Development Goals (SDGs).

## 5. Standards Development Principles

Zambia's standardization system is based on globally accepted principles for standards development. These are:

- a) **Transparency** Essential information regarding standardization activities is accessible to all interested parties.
- b) **Openness** Participation is open to all affected interests.
- c) **Impartiality** No one interest dominates the process or is favored over another.
- d) **Effectiveness and Relevance** Standards are relevant and effectively respond to regulatory and market needs, as well as scientific and technological developments.
- e) **Consensus** Decisions are reached through consensus among those affected.
- f) **Performance Based** Standards are performance based (specifying essential characteristics rather than detailed designs) where possible.
- g) **Coherence** The process encourages coherence to avoid overlapping and conflicting standards.
- h) **Due Process** Standards development accords with due process so that all views are considered and appeals are possible.

### 5.1 Standards Development Process

The development of these standards will follow a stakeholder consultative process which involves the following main stages:

- a) **Proposal:** A proposal is presented to ZABS for consideration to develop a standards for a particular subject matter. In the case of the standards included in this strategy, the standards will be formally presented as proposals for work to start the development of standards on each subject matter.
- b) **Drafting:** when the proposal is approved, the work on the standards begins. The standards subject matter is assigned to a Technical Committee if it exists. If the Technical Committee (TC) to undertake the work is not yet constituted, a new TC is constituted. The Committee comprises experts and interested parties on the subject matter.

In order to align the standards to international standards, the working draft to be used as a working document is as much as possible based on international standards which are either adopted identically or adapted to suit the local situation whilst as much as possible maintaining international alignment. Where international standards don't exist, regional or national standards are used as working documents which are adapted through committee discussion. Whichever the source of the document, the drafting ensures that the draft standards are as closely as possible aligned to international requirements.

- c) **Constitution of Technical Committee:** Constitution of a Technical Committee is done when there is no existing committee that can undertake a particular task in standardization. The Technical Committee will comprise experts on the subject matter and other interested parties.

- d) **Committee Discussion:** At this stage the working document (i.e. draft standard) developed in step 2 above is subjected to expert and stakeholder discussion in order to reach consensus on the contents of the standard. Once the Committee agrees on the contents, the draft is approved for public comments.
- e) **Public Enquiry:** The draft standards that have been discussed and approved by the Technical Committee are circulated for public comments after which comments are incorporated in the drafts by the Technical Committee. If as a result the draft standard changes substantially from the original draft, it is again circulated for public comments. This back and forth movement of the draft between public comments and Technical Committee discussion continues until there are no substantial comments from the public.
- f) **Approval:** The standards are presented to the ZABS Board for approval.
- g) **Publication:** The draft standards are officially published in the Government Gazette
- h) **Systematic Review:** The standards are reviewed regularly every five years for continued suitability, and as and when need arises.

## 6. Standards to be Developed

The Strategy estimates to develop a total of at least 484 standards over a period of three years as detailed in Appendix

## 7. Resources

### 7.1 Human

The required human resources to coordinate the development of these standards was calculated based on the International Organization for Standardization (ISO) method. A total of twelve (12) additional Technical Officers to the existing 4, five (5) Editors and five (5) Secretarial support Staff per year are required to undertake the development of the standards included in this Strategy. The development of all the proposed standards within the National Standards Strategy period is on the assumption that the required sources will be available

### 7.2 Financial

A total budget required to develop these standards will be advised on an annual basis.

## 8. Conclusion

The National Standards Strategy represents a collaborative commitment to action and remains a living document, as stakeholders work together to bring about their shared vision. It applies to the entire National Quality Infrastructure (NQI); action and reporting progress against this Strategy will be a responsibility of all key stakeholder groups. ZABS encourages all stakeholders to continue to provide input into the suitability of this Strategy and make recommendations for improvement. The National Standards Strategy is published (date of approval and publication) and will be reviewed in 2021. For progress reports and more information on the implementation of the Strategy consult the ZABS website ([www.zabs.org.zm](http://www.zabs.org.zm)).

## APPENDIX : STANDARDS IDENTIFIED FOR DEVELOPMENT

**Key:** AD: Adoption; EV: Evaluation; NA: National Development; Mo: Monitoring

<b>Sector</b>	<b>Field/Subject</b>	<b>List of Standards Identified</b>	<b>Method of Dev.</b>	<b>Priority</b>	<b>Year of Development</b>
